## Hearse Deck

## Protecting Your Investment

Link's HD150 Hearse Deck provides distinct advantages for funeral directors. Vehicle protection, mortuary container security and an aid for professional appearance, combined with the reliability and durability Link CMP is known to provide, results in a longer vehicle life and a lower cost of ownership.

This durable deck system installs in the rear of a hearse, protecting the surfaces that regularly come into contact with coffins, cots and air trays. A rubber mat extends over the vehicle's bumper, preventing scratches and scrapes that occur during the loading and unloading of mortuary containers.

Easily load, unload, and secure many forms of mortuary containers. A bier pin system allows for container securing, preventing unwanted movement during transit. The quality materials and professional appearance of the HD150 single deck system lengthens the value of the hearse while speaking to the professional credibility of the owner.

### LONG LASTING PROTECTION

The durable aluminum framework ensures reliable surface protection against regular contact from cots and containers.

### PROFESSIONAL APPEARANCE

The design of the hearse deck system utilizes materials that will speak to your credibility as a professional in the industry.

### BUMPER PROTECTION

The deck includes a rubber mat that extends over the vehicle's bumper, preventing scratches that occurs during loading and unloading.

### EASE OF TRANSPORTATION

This hearse deck is designed to make loading and securing mortuary cots and containers easy, saving time and effort.

### LIGHTWEIGHT DESIGN

At only 58 lbs, the deck isn't cumbersome for installation and doesn't add much weight to the vehicle.
